Patient Outcomes

Key Insights

- **Patient demand peaks in Jan–Mar**, increasing pressure on emergency services.
- **Average wait time is 61.37 mins** with a **17.04% readmission rate**, indicating patient flow inefficiencies.
- **Emergency cases (44.1%)** are the largest patient group, driving operational workload.

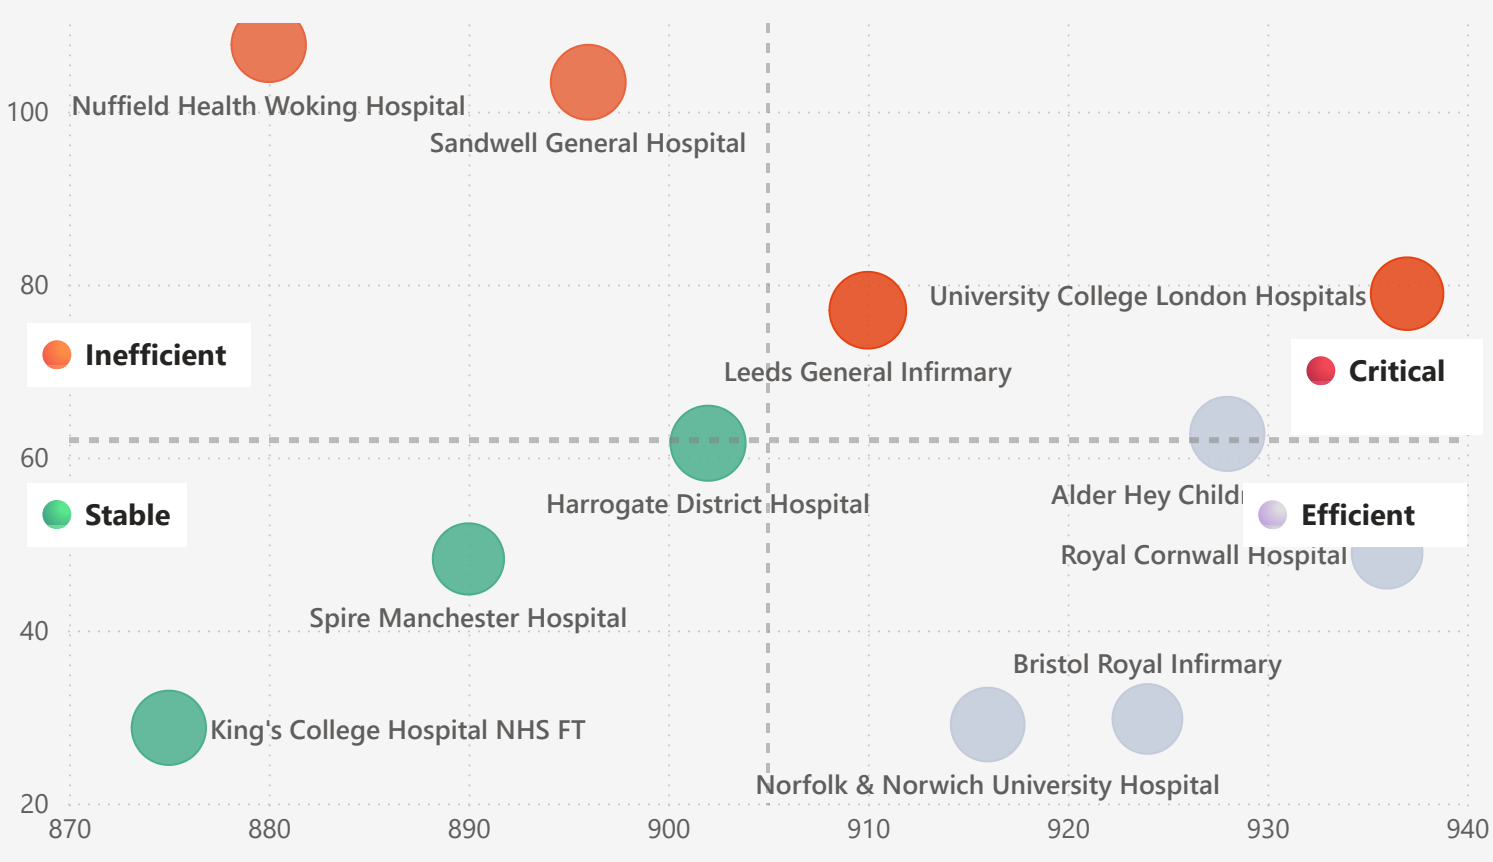

Recommendations

- Increase staffing and bed capacity during seasonal peaks.
- Reduce wait times through faster triage and discharge planning.
- Prioritize improvements in high-

Department Performance Summary

Department	Total Visits	Avg Wait Time(min s)	Avg LOS(Hrs)	Mortality Rate	Readmission Rate	Avg Satisfaction Score	Department Status
Cardiology	1071	60.13	41.54	2.99%	18.49%	64.16	Good

Emergency Patient Flow: Arrival to Outcome

Key Insights

- Average LOS (41.49 hrs) and 73.99 mins delay indicate patient flow bottlenecks.
- 16.2% of patients require ICU care, with emergency admissions showing the highest clinical pressure.
- Hospitals with longer waits also experience longer stays, impacting operational efficiency.

Recommendations

- Reduce delays through faster triage, discharge, and bed turnover.
- Prioritize high-pressure hospitals and long-stay patient groups.
- Optimize ICU capacity and staffing during peak demand.

Total Revenue

Revenue vs Operation Cost Trend

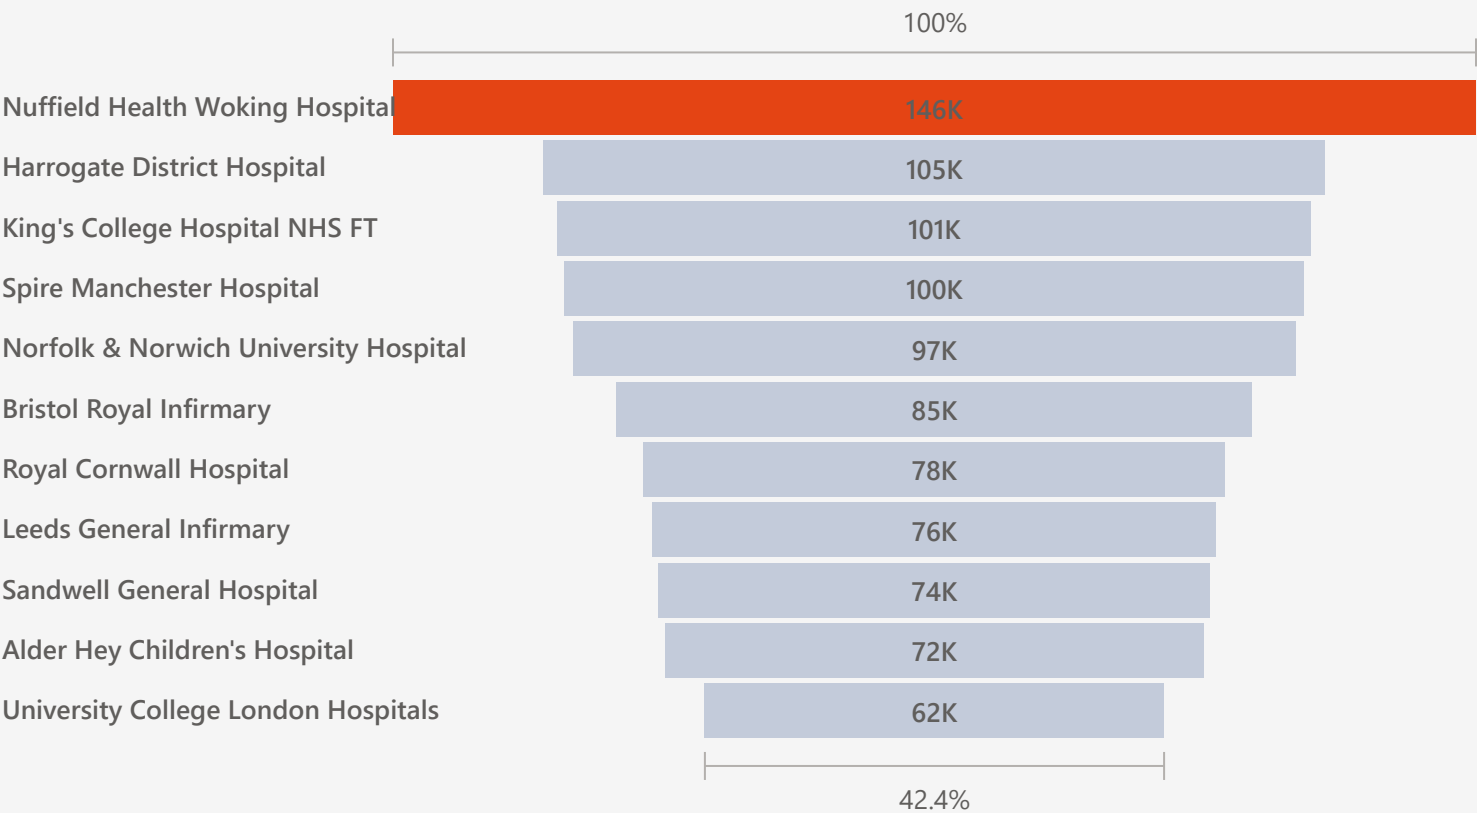

Key Insights

- **Burnout (59.66%)** and nearly **1M overtime hours** indicate significant workforce pressure.
- Rising staffing costs and absences may impact operational efficiency despite a **17.44% profit margin**.
- Hospitals with lower burnout generally demonstrate stronger financial and operational performance.

Recommendations

- Reduce overtime through workforce optimization and balanced staffing.
- Invest in staff wellbeing to lower burnout and absenteeism.
- Balance workforce allocation across hospitals to improve efficiency and profitability.

Overtime Hours by Hospital

Hospital Financial Health Matrix

Hospital_Name	Avg Burnout Index		Overtime Hours	Staffing Cost	Profit Margin %	Efficiency Score
